

LEARNING FROM H.I.M. (Harvey, Irma, Maria)

How did your supply chain behave just before, during, and since hurricanes Harvey, Irma, and Maria?

How did your supply chain surprise you – good or bad – related to H.I.M.?

What did you learn? What are you doing differently today, because of H.I.M.?

Philip Palin is facilitating today's panel. He is also part of a team developing Supply Chain Resilience cases for a study by the National Academies of Sciences, Engineering and Medicine.

If you would like to tell your supply chain story, please let Phil know either by introducing yourself today or sending him an Email at philippalain@gmail.com.

You can tell your story on an attributed or confidential basis. There is interest in hearing about primary, secondary, and tertiary effects. There is a particular interest in hearing about any hidden supply chain dependencies or interdependencies that the storms exposed.

Phil is the son and grandson of grocers. Over the last decade he has focused on Supply Chain Resilience with the National Academies and others. He would love to hear your story.
